Re: NCSI – Your Greenhouse Assessment Solution

As you're probably aware, the National Greenhouse and Energy Reporting System (NGERS) Policy Paper has been released, with initial reporting requirements being well documented. The NGER Act requires 'controlling corporations' to register and report if they emit greenhouse gases, produce energy, or consume energy at or above specified quantities per financial year. The registration window opened on 1 July 2008.

As your current certification and compliance provider, NCSI is well equipped to support your business meet its greenhouse assessment and reporting requirements.

- NCSI is a panel member of the Emission Trading Panel for the Department of Climate Change
- NCSI has a team of energy and greenhouse assessors
- NCSI has developed www.mygreenaudit.com to keep you up-to-date with greenhouse and energy reporting requirements and solutions

YOUR NEXT STEP: LET NCSI TAKE A STOCKTAKE OF YOUR GREENHOUSE NEEDS

NGER Scoping and Gap Analysis Assessment

NCSI has developed a customised Scoping and Gap Analysis Assessment methodology to help organisations understand their current status with regard to the requirements of NGERS. Our Scoping and Gap Analysis service provides a strong baseline and platform to determine subsequent expenditure and allocation of valuable resources to ensure a timely and effective outcome to meet compliance expectations from industry, regulators and stakeholders.

The NGER Scoping and Gap Analysis Assessment will also enable you to gain clarity on current system strengths and weaknesses as a basis for strategic planning.

The Assessment will include:

- A one day scoping workshop with your key staff including an interactive session that translates NGERS, step-by-step in the context of your business. Also included in the scoping workshop will be a review of your related business assets and systems.
- A three day gap analysis of your operations (the duration of the gap analysis is dependent upon your current circumstances and is subject to clarification, but is typically three days). The gap analysis includes a wrap-up session and development of a comprehensive report outlining current strengths and areas for improvement as well as identification of optional next steps.

The **four day NGER Scoping and Gap Analysis Assessment** costs **\$10,100 ex GST** and includes all travel costs (excl airfares), \$11,110 inc GST.
